

Web Application Development Project Assignment

Minimum 7 interlinked HTML pages, consistent design, responsive layout, HTML/CSS/JS/Bootstrap, realistic content, Git/GitHub with specific commit dates and a minimum of 34 commits.

1. Refined Assignment Instructions (Student-Facing)

Objective

Build a fully responsive, multi-page web application that presents realistic, well-structured content. Apply core front-end technologies (HTML, CSS, JavaScript, Bootstrap) while using professional version control with Git and GitHub.

Core Requirements

#	Requirement	Details
1	Pages	At least 7 distinct HTML pages. All pages must be interlinked via a clear navigation menu (header/footer) and contextual hyperlinks.
2	Consistency	Unified visual identity across all pages: same colour scheme, typography, navigation layout, footer, and overall design language.
3	Technologies	HTML5, CSS3, JavaScript (ES6+), and Bootstrap 5 (or 4). You may add custom CSS on top of Bootstrap.
4	Responsiveness	Pages must be rendered correctly on desktop, tablet, and mobile devices. Use Bootstrap's grid system, flexbox, and media queries.
5	Realistic Content	All text, images, and data must reflect a real-world theme (e.g., a small business, portfolio, e-commerce showcase, community hub, educational platform). No placeholder "lorem ipsum" for the main content – use genuine, coherent information.
6	Interactivity (JavaScript)	Implement at least two interactive features, for example: a dynamic contact form with validation, a filterable product gallery, an image carousel, a dark/light mode toggle, or a live search/filter.
7	Version Control (Git & GitHub)	- Create a private or public GitHub repository. - First commit must be dated 15 June 2026. - Provide a repository link by 21 June 2026 to show incremental progress. - Final commit must be dated 28 June 2026. - Total commits ≥ 34 by submission deadline 28 June 2026 23:59. - Commit messages must be meaningful (e.g., "Add navigation bar", "Implement responsive product grid"). - No large "final" uploads – commits must show incremental progress.
8	Submission	Provide the GitHub repository URL by 21 June 2026 23:59 . Ensure the repository includes all source files (HTML, CSS, JS, assets). The live preview (GitHub Pages or any static host) is recommended but not mandatory.

Additional Guidelines

- **Page structure example** (choose your own theme): Home, About, Services/Products, Blog/News, Contact, Gallery, FAQ or Testimonials.
- **Navigation:** Use a responsive Bootstrap navbar that collapses on mobile.
- **Forms:** At least one functional form (e.g., contact, sign-up, comment) with JavaScript validation.
- **Images:** Optimize for web; use alt attributes for accessibility.
- **Code quality:** Indent properly, use meaningful class/id names, separate CSS/JS files where appropriate (but inline in a single page is allowed only for demonstration; external files preferred).
- **Browser compatibility:** Test on latest Chrome, Firefox, Edge.

Submission Deadline

28 June 2026, 23:59 (local time). Late submissions will yield a Zero mark. No Make-up assessment shall be planned.

2. Examination Rubric Matrix (0–5 Scale)

Each criterion is scored from **0 (inadequate)** to **5 (exemplary)**. Multiply by weight if needed – here we keep raw scores for clarity.

Criterion	0 – No evidence / not attempted	1 – Very poor	2 – Poor / major flaws	3 – Satisfactory	4 – Good	5 – Excellent
Number of pages & interlinking	Fewer than 5 pages, broken links	5 pages, many missing links	6 pages, some links missing or inconsistent	7 pages, all pages linked but navigation could be clearer	7+ pages, logical linking with breadcrumbs or contextual links	8+ pages, perfect interlinking, intuitive user flow
Consistency of design	No coherent style – each page looks different	Minimal consistency (only font)	Consistent colours but layout varies; some pages broken	Same header/footer, colour scheme, typography across all pages	Unified design with subtle variations that enhance usability	Professional, pixel-perfect consistency plus adaptive components
Use of Bootstrap & responsiveness	No Bootstrap, not responsive	Bootstrap used but pages not responsive on mobile	Partial responsiveness – some elements overflow or misalign	Responsive on all standard devices; Bootstrap grid used correctly	Fully responsive with custom breakpoints; looks excellent on all sizes	Responsive + advanced Bootstrap components (offcanvas, modals, tooltips)
Realism of content	Fake or entirely placeholder text	Minimal realistic	Some realistic data but mixed with placeholders	All content realistic and related to a coherent theme	Content is detailed, accurate, and engaging	High-quality, professional content that could be

		content, mostly "Lorem ipsum"			(e.g., real product names, team bios)	used in a real production site
JavaScript interactivity	No custom JavaScript	One simple feature (e.g., alert on click)	Two features but with bugs or poor UX	Two working features (e.g., form validation + dark mode)	Two or more polished, user-friendly features	Three+ creative, smooth features that significantly improve user experience
Git & GitHub – commit count	No repository or <10 commits	10–19 commits	20–29 commits	30–33 commits	34–39 commits	40+ commits (exceeding requirement)
Git – commit dates & incremental work	Single commit on deadline	2–3 large commits, no date spread	Commits mostly within 2 days, first/last dates not respected	First commit 15 June, last 28 June but several empty/gaps	First & last dates correct, steady activity every 1–2 days	Perfect histogram: commits almost daily, logical growth, meaningful messages
Code structure & best practices	HTML/CSS/JS all inline, unreadable	External files but no organization	Some semantic HTML, inconsistent indentation	Well-structured, external files, semantic tags used	Modular CSS, reusable JS functions, comments where needed	Production-ready code, error handling, accessibility attributes (ARIA)

Total possible raw score: 40 (8 criteria × 5).

Grading Scale (from raw score)

Raw score	Grade
36–40	A+ / Excellent
32–35	A / Very Good
28–31	B / Good
24–27	C / Satisfactory
20–23	D / Passing
0–19	F / Fail

3. Milestone Guide (Every 4 Days)

Use this guide to evaluate progress **every four days** starting from the assignment launch. Instructors should check the GitHub repository and request a brief demo or report at each milestone.

Milestone	Date (2026)	Expected deliverables	Evaluation questions
Milestone 0 (Kick-off)	15 June	Repository created, README written, initial HTML skeleton (index.html) committed.	- Is the repo public/accessible? - First commit date = 15 June? (If earlier, allowed but must still have commit on 15th) - Basic structure planned?
Milestone 1	19 June	At least 3 pages completed and interlinked. Bootstrap integrated. Basic responsive navbar works. At least 8 commits by this date (cumulative).	- Pages: Home, About, Contact? - Check responsiveness on mobile. - Commit history shows regular work.
Milestone 2	23 June	At least 5 pages complete. All pages share consistent design (CSS/Bootstrap theme). First JavaScript feature implemented (e.g., form validation). At least 18 commits total.	- Is design consistent? - Does JavaScript work without errors? - Commit messages describe changes clearly.
Milestone 3	27 June	All 7+ pages finished and linked. Second JavaScript feature completed. Content is realistic and finalized. At least 28 commits total. Responsiveness verified on real devices.	- All hyperlinks tested. - Does the site tell a coherent story? - Are images and text real?
Final submission	28 June	Last commit by 23:59 . Total commits ≥ 34 . All rubric criteria met. Optional: deploy via GitHub Pages.	- Commit dates: first = 15 June, last = 28 June. - No last-minute “dump” of many files. - Project meets all core requirements.
